Web Hosting Ideas - Design Process

Stage 1: Analysis and Consultation
The first stage includes preparing of quote(s) for the client & development of requirements specification (for internal use - after we get client's approval of the quote).

Stage 2: Graphic Design
We make a layout for the client's web site, more if needed. The client revises the layout(s) and chooses one of them. (Comments and changes if needed).

Stage 3: HTML-Coding (Prototype) - For Web
We create the "shell" of the site, which demonstrates features of the site. If the client approves it, we start programming.

Stage 4: Database Configuration
We create a database and confirm the structure with the client (if needed).

Stage 5: Programming - For Web
Programming of all necessary features. (HTML, JavaScript, PHP etc).

Stage 6: Testing & Debugging - For Web
- Testing and debugging on our servers.
- Upload to the client's server.
- Testing and debugging on the client's server.

Stage 7: Rollout
Documentation, final changes, additional testing, etc.
